

CLEEN SWEEP® SYSTEM

Automate trailer cleanout by installing a CleanSweep® system.

An aging workforce in the transportation industry presents a challenge. Preventing injuries that can sideline a driver or worse is a top priority. The CleanSweep® system replaces manual tarps and brooms that require drivers to enter the trailer.

Powered by a winch system, the CleanSweep® tarp extends down the inside of the trailer, with the load resting on the top of the tarp. As the *WALKING FLOOR*® system unloads the trailer, the weight of the material pulls the tarp along the floor, cleaning it as it goes. Once the unloading is completed, the CleanSweep® tarp is retracted at the push of a button.

- ✔ **Improved Driver Safety**
Eliminates the need for drivers to enter trailers, reducing the risk of falls, injuries, and even death by burial.
- ✔ **Increased Driver Productivity**
Drivers can get back on the road faster without having to manually sweep the trailer.
- ✔ **Reduced Payload Cross-Contamination**
A clean trailer minimizes the risk of payload cross-contamination from one load to the next.

MULTIPLE WINCH OPTIONS

KEITH offers electric and hydraulic versions of the CleanSweep® winch system to meet your specific needs.

Hydraulic Winch

Plumbed into the same hydraulic system as the floor.

Electric Winch

Powered by trailer electrical or battery operated.

Winch Latch Lock Kit

Optional lock kit secures tarp system when trailer is tipped.
